

SLAM EXPLORATION ANNOUNCES NEW COPPER-LEAD-ZINC-SILVER DISCOVERY

FOR RELEASE 9:25AM

September 7, 2006

Miramichi, New Brunswick - SLAM Exploration Ltd. (TSX-V: SXL) (“**SLAM**”) is pleased to announce a new copper-lead-zinc-silver discovery at the Hayden Brook property. This discovery was made by Mert Stewart, a well known New Brunswick prospector and past recipient of the Prospector of the Year Award from the Prospectors & Developers Association of Canada (PDAC). Through an option agreement with Mr. Stewart, SLAM has the right to earn 100% interest in the Hayden Brook property.

This discovery is comprised of angular blocks of sulphide mineralization over a strike length of 900 metres grading up to 0.5% copper, 6.2% lead, 1.8% zinc and 96.2 grams/tonne silver. Sulphide breccia mineralization is associated with quartzite, iron formation and black slate of the Tetagouche group. Tetagouche rocks in New Brunswick host the world class Brunswick No. 12 mine, a 10,000 tonne per day zinc-lead-silver mining and milling complex owned and operated by Xstrata PLC.

The new discovery, in an under-explored area of untold mineral potential within the highlands of Central New Brunswick, is located 125 kilometres southwest of the Brunswick No. 12 Mine and 25 km southeast of the historical Burnt Hill tungsten mine. As a result of the new discovery, staking of 25 additional claims expanded the property to 75 claims covering 1200 hectares.

The Company is encouraged by the results from this preliminary evaluation program at Hayden Brook. A soil geochemistry survey is currently in progress to further define the trend and identify specific targets to be tested. Exploration of the Hayden Brook property is consistent with SLAM’s strategy to discover and develop base metal/silver resources that complement the expanding zinc deposit at Nash Creek.

SLAM Exploration Ltd. is a mineral resource company based in Miramichi, New Brunswick. The Company’s 100% owned Nash Creek zinc-lead-silver deposit is a key component of a growing base metal resource inventory in New Brunswick. Additional deposits owned by SLAM in New Brunswick include the Nepisiguit A, Nepisiguit B, A’Hearn, Strachens East and Strachens base metal deposits within the Bathurst Mining camp. The Company also has the right to earn 100% interest in 2063 claims centered in the Bathurst Mining camp. SLAM also holds varying interests in four gold properties in the gold producing Uchi sub-province of northwest Ontario.

Exploration manager, Derek Brown, P.Ge. is the qualified person responsible for the technical disclosure provided in this news release. Additional information about SLAM and its projects is available at www.slamexploration.com or from SEDAR filings at www.sedar.com. The TSX Venture Exchange has not reviewed and does not accept responsibility for the adequacy or accuracy of this release.
