STOXLINe provides several technical indicators showing attainable targets and suggest a new upward trend may be forming.

This follows a recent buy recommendation by eResearch, which updated their report and maintain their target on SLAM. You can view the report at the following link:

eResearch comments on SLAM's recent drilling success at its wholly-owned Reserve Creek project gold campaign citing a 10.4-metre core interval grading 7.68 g/t gold and a 16.85-metre interval grading 16.45 g/t gold from hole RS10-16 adding that these intersections compare to producing mines in the Uchi mineralization trend.

### **About Reserve Creek Gold Project:**

SLAM's wholly owned Reserve Creek gold project now encompasses 7120 hectares in 34 mineral claims located near Fort Hope, Ontario. Reserve Creek is part of a large and valuable land package with an expanding inventory of gold deposits centered around Fort Hope approximately 150 km east of the former gold mining town of Pickle Lake. The large greenstone belt surrounding Fort Hope has many similarities to the prolific Red Lake gold mining camp and has potential to be a major gold producing area. The Red Lake, Pickle Lake and Fort Hope gold areas are part of the Uchi subprovince, a major system of greenstone belts extending from Lake Winnipeg to the Hudson Bay lowlands.

The Reserve Creek drilling activities are being conducted in consultation with Eabametoong First Nation (“EFN”) in accordance with a mutual Exploration Agreement. This Agreement calls for EFN and SLAM to work cooperatively to advance the gold potential of Reserve Creek and other projects in the Fort Hope area of Ontario.

### **About SLAM Exploration Ltd:**
